Subject: Campus Evacuation Drill

On August 12, 2014 members of the Emergency Management team were alerted to respond to a campus fire drill. The objectives of the drill were to test the soundness of the emergency preparedness plan from the perspective of organizational structure and process, and to allow plan leaders to utilize their administrative expertise and knowledge of the document in working through an emergency.

Drill results show that the emergency response plan was successful at evacuating students and staff, lessening the extent of personal injuries that may have occurred, and protecting assets. A copy of the drill specifics have been logged and will be kept in the office of Campus Safety.
